

General Notes: easy to run out of time. If have no idea what's going on try and correlate history provided with the image or even nature of questions (last resort). Need to do dot points, practice this before hand.

Apr-05

Image and format	Picture diagnosis	Stem Questions (3 questions on each image)
Contrast meal of oesophagus Young woman with a laparotomy image of her small intestine, inflamed with fibrin present Pigmented lesion on sole of foot	Achalasia ?Crohn's disease	What is seen, what is the aetiology, ? What is the diagnosis, what are the histology findings,?
Ulcer over dorsum of toe, interphalangeal joint. Patient looks to have had a great toe amputation. CT of a pelvic abscess CT of abdomen, patient post subtotal gastrectomy, fever, unwell Photo breast, young woman post partum, asymptomatic breast cyst aspirated -milk Photo young male with L breast enlargement Photo elderly woman with fungating breast/chest wall mass Photo of man with arms above head, the arms down Photo lady with a swollen anterior thigh CT scan abdo, mass in region of L adrenal, young hypertensive patient Photo Fijian lady 43yo with a L swollen leg 5 years duration Operative photo of a neck operation 2 incision R side Angiogram of SMA with filling defect ERCP with dormia basket in place	Acral melanoma Pressure/ischaemic ulcer ?PVD Diverticular abscess L Subphrenic abscess. Galactocoele Gynaecomastia Advanced breast cancer Pemberton's sign Sarcoma of thigh Pheochromocytoma Lymphoedema of L leg Branchial fistula excision SMA embolism	Diagnosis, what determines the prognosis, further management What do you see, causes? Diagnosis, Differential diagnosis, Management options Diagnosis, Investigations, Management Treatment, Indications for biopsy, how you manage Diagnosis, causes, management What do you see diagnosis, investigations, management Most likely cause, investigation, treatment Diagnosis, Investigations, Management Diagnosis, other tests, ? Diagnosis, Investigations, Management Condition, aetiology, complications Diagnosis, initial treatment, management What is it an xray of, what are the risks of the procedure, how can you prevent complications preoperatively Diagnosis and what 2 pieces of further information would you like, investigations and operative option Diagnosis,?, Treatment
Photo of lady with prolapse	Rectal prolapse	Diagnosis and what 2 pieces of further information would you like, investigations and operative option Diagnosis,?, Treatment
Photo 2 legs one pale. Hx Young male Day 1 post repair of fractured tibia and fibula Angiogram of coeliac axis	Compartment syndrome L leg ?Accessory hepatic artery of the L gastric	What is the abnormality, what operations does this condition affect, how often does it occur
Specimen photo of colon showing multiple polyps	FAP	What is the genetic defect and other manifestations, screening of family members, what operation for the patient
Photo of perineum showing gangrenous areas CT scan of upper abdo showing a cystic liver lesion. History 54 yo Greek farmer CT scan in a 45yo showing a large abdominal cystic mass Photo of perineum showing inflamed area adjacent to anus Photo elderly man showing lesion on forehead, present for 4 weeks	Fournier's gangrene Hydatid cyst ?Mesenteric cyst Ischiorectal abscess Keratoacanthoma	Diagnosis, causes, management What does CT show, other investigations to confirm diagnosis, lifecycle of the condition Diagnosis, management Pathogenesis, treatment, complications What are the possible diagnoses, what are the histological features that distinguish them, treatment
Parting notes: Set out Photo on left side of booklet and questions on R side with lined writing space underneath		Time runs out quickly 4.8 minutes per answer. Again if can not work out what the image shows integrate all the other info but don't spend too long.
